

# Individual Child Behavior Inventory: Primary

This form, derived from the *Developmental Environment Rating Scale (DERS)*, enables observers to track detailed behaviors of a single child in the classroom during the course of a single work period. As each behavior is linked to outcomes in Executive Functions, Cultural and Linguistic Fluency, and Social Fluency and Emotional Flexibility, observers may use this to pinpoint areas in need of attention and/or intervention. Items marked with an \* are behaviors we look to diminish while the others are those we look to increase.
