Teacher Appraisal Instrument (Primary)

To be used alongside: DERS Teacher Growth Plan

The *Teacher Appraisal Instrument* (TAI) is designed to enable targeted, constructive, summative assessment of developmental teaching practice. The TAI consists of 46 items linked to sixteen indicators, which are clustered around four domains: Assessment, Preparation, Invitation, and Protection.

The instrument focuses on teacher moves that support the development of key executive functions, social and emotional skills, and spoken and written language fluency. As the figure (*left*) illustrates, the logic of the tool is based on a cycle of activity that begins with assessing student readiness, which informs the preparation of a developmentally appropriate learning environment. Within that environment, the teacher invites the child to engage in constructive activity, and once the child is engaged, protects that engagement in ways that both support the child's attention and concentration and model respectful social interaction.

TAI's emphasis on teacher behavior aims to provide evaluators a rigorous appraisal based on highly specific, detailed analysis of practice.

How to Use the Tool

To be most effective, the TAI should be used as part of a constellation of observational, self-report, and reflective data. Data sources include: Notes collected through classroom observations and the *Developmental Environmental*

Rating Scale, teacher selfassessment and reflection captured in the *Teacher*

Growth Plan, and conversations with the teacher.

Using these sources, the evaluator scores each of the items based on a 1-9 scale. Score of 6 and above should be entered to the right of the item; and scores below 6 to the left. Items are totaled to produce (1) and Indicator Score and (2) a Domain Score. Indicator Scores enable the evaluator and the teacher to identify specific areas of strength and growth, and Domain Scores allow a more holistic view of the teacher's practice. In the sample (*right*), the teacher is working beyond the standard in all but one Indicator, and her Domain Score is 107 out of a possible 144.

A qualitative appraisal, along with recommendations for future attention and refinement, is composed by the evaluator based on insights provided by the indicator and domain scores.
